

[Return to command index](#)

help utility

command: HELP [<cmds>]

Displays help information about seismic handler commands. It is possible to get a directory of all commands available ([HELP/DIR](#)), a command menu with short catchwords ([HELP/KEY](#)), a list of lines containing command verb and its parameters ([HELP/CALL](#)) or detailed information about one or more commands specified by <cmds> (without qualifier).

parameters

- <cmds> *parameter type: string*
Name of command or wild card expression ("*" is wild card for arbitrary text). The HELP command without parameter is equivalent to the command "[HELP/DIR](#) *", it displays the directory of all help items available.

qualifiers

- /dir
Displays all command verbs matching the wild card expression <cmds>. The HELP command without any parameter is equivalent to "[HELP/DIR](#) *".
- /call
Displays all commands matching the wild card expression <cmds> with their parameter lists (without description of parameters).
- /key
Displays a menu of commands matching the wild card expression <cmds> with a very short description of the command.
