## Seismic Handler

A prepackaged version of SH/SHM is available at the software archive: [Release notes and installation instructions](#). For more information please refer to the detailed [general installation instructions](#) for several Linux systems.

Recent versions of all Seismic Handler flavors are available via [subversion repository](#). Please note: The repository regarding SH/SHM at this site is a mirror of our internal repository. If you have comments to any revision please relate to the original revision included in every check-in log. This information line also includes the original author and date of change.

To check recent changes please feel free to use the capabilities of this trac installation: [source browser](#).

## Virtual appliance

To use this virtual machine you need at least the free-of-charge [VMware Player](#).

- [Xubuntu 12.04 LTS](#) (bzip2 compressed)

To save bandwidth, these machines are compressed using the [zip](#) or [bzip2](#) algorithm. If use your Linux, download the bz2 archive and simply unpack by

```
tar xjf Seismic-Handler-2013a.tar.bz2
```

Windows lacks support for this compression, so please try [7-zip](#) (free and open-source), which should easily deal with our BZIP2 archive.

## Additional software

- [fetch\\_build\\_inventory](#) - tool for fetching meta data from arlink servers
- [scxml2evt](#) - conversion tool [SeisComP3](#) XML dump to EVT file
- [sh2sac](#) - conversion tool from [Q-files to SAC \(binary\)](#)

## Additional information
