## restore info entry

**command:** RESTORE <entry> <file>

Restores the given info entry <entry> of all traces of the display from the input file <file>. This file must have been created with the SAVE command procedure.

### parameters

- <entry> *parameter type: info entry*  
Name of info entry to be restored.
- <file> *parameter type: filename (without extension)*  
Name of the file which contains the entry values. Must be created by the SAVE command procedure.

### example

```
restore T-ORIGIN TO_BJI
    restores the time origins of all traces of the display from the file TO_BJI.STX
```
