show q-file comment

command: SHOWQCMT <q-file>

Displays the comment lines at the beginning of a q-file header. These comment lines refer to all traces in the file and shouldn't be confused with the "comment" info entry of every single trace.

parameters

- <q-file> *parameter type: filename (without extension)*
Name of q-file whose comment lines are to be displayed.

example

```
showqcmt myqfile  
    displays comment lines of q-file MYQFILE
```
