

Seismic Handler Motif version: SHM

The graphical version using the Motif framework was developed for observatory purposes. It's widely used for interactive processing of local, regional and teleseismic events. SHM offers important features for array analysis.

- [SHM documentation](#) is now part of this website as well as updated versions of source code (available here via [subversion repository](#) and on [our download page](#)).
- [Installation instructions](#)
- The [Seismic Handler wxWidgets version](#) (SHX) is supposed to succeed the motif version.

Virtual appliances

We provide you with several virtual linux machines having [SH](#) and [SHM](#) already installed. For more details please check out our [download page](#).
